Acknowledgments

The authors would like to thank the following people for their support and assistance with this project:

- Kerry Anderson, Community Leadership, Loddon Murray
- Katrina Baddeley, Victorian Regional Community Leadership Program Secretariat
- Fiona Chambers, Marcus Oldham College
- Anne Duncan, Australian Grape and Wine Authority
- Jo Eady, Rural Scope Pty Ltd
- Alexandra Gartmann, Foundation for Rural and Regional Renewal
- Amanda Hennessy, Leadership Great South Coast
- Neriman Kemal, Foundation for Rural and Regional Renewal
- Danielle Lloyd-Prichard, NSW Department of Primary Industries
- Debbie Rice, Department of Regional Development (WA)
- Barry Rogers, Committee for Gippsland
- Georgie Somerset, Red Earth Community Foundation
- Karen Tully, National Rural Women’s Coalition
- Julie Weldon, JAW Communications
- Rosemary White, Committee for Geelong
- Philippa Woodhill, Australian Rural Leadership Program

A ‘BIG’ thank you goes to all the people who set aside the time to complete the project survey and distribute it through their networks.
1 Introduction

The purpose of this report is to share the findings of an environmental scan of rural, regional and remote leadership programs currently being delivered across Australia. The project was initiated by the Foundation for Rural and Regional Renewal (FRRR); Andrew Huffer and Associates (AH&A) was engaged in November 2014 to commence this work.

The project aims to obtain a clear understanding of the program offerings and reach across Australia’s rural, regional and remote landscape.

The report examines the key findings, with seven recommendations for FRRR and other stakeholders to consider as to how they might support and enhance leadership development across rural, regional and remote Australia. In assessing leadership program offerings a range of elements were examined, including:

- Scale – be it regional, state or national
- Target audience - business, community, industry, Indigenous, women or youth
- Delivery mode – face to face, online and project components
- Accessibility – participant cost, inclusivity policies and location
- Evaluation – how impact is measured
- Alumni – how involvement is maintained post-program

2 Scope

The scope of the project was to provide information on the range of rural leadership programs on offer.

The report has intentionally focused on leadership programs (referred to as rural leadership programs) designed specifically for rural, remote and regionally-based people. The report uses a definition of leadership programs (adapted from the Australian Rural Leadership Program) as programs that ‘aim to produce measurable and significant improvements in leadership capacity.’

Two categories of programs were analysed:

i) Long-term programs – over ten days duration, normally involving a residential component

ii) Short-term courses – less than ten days duration, predominantly serving as introductory programs.

Several national and state-based leadership programs initially surveyed were excluded from the project analysis as they did not encompass issues directly relevant to rural, remote and regional participants within their scope. Those that were delivered exclusively in capital cities, with no rural component were also excluded.

The report does not include scholarship programs (e.g. the Nuffield Scholarship) or philanthropic organisations (e.g. the Gardiner Foundation) as they were not judged to be stand-alone leadership programs.

It’s most likely that several leadership programs have not been included within this report due to limitations in reaching program providers or the online visibility of existing programs.
Individual analysis and benchmarking of the efficacy and effectiveness of particular programs, including any assessment of the merits of evaluation methodologies was beyond the scope of this project.

3 Methodology

To understand the landscape of leadership programs in rural, regional and remote Australia, four key methodologies were employed:

- Background research
- Survey
- Interviews
- Analysis

3.1 Background research

A preliminary online background research and review of publicly available information was undertaken to identify key leadership programs and providers. This helped to inform survey and interview questions, and gain an initial overview of the rural leadership sector.

3.2 Survey

An online survey was undertaken in December 2014. The survey was distributed through the FRRR database to approximately 3000 people. The AH&A database of approximately 300 people was also utilised to distribute the survey. LinkedIn and Facebook were also tested as means of gaining further survey responses. This was based on the premise that providers and participants of rural leadership programs utilise these channels for information sharing and promotional opportunities. Whilst this may be the case, the level of activity regarding the survey on these channels indicated that they generated a low response rate.

The survey was fully completed by 436 people*. It targeted three key groups of people with an interest and role in leadership programs:

- **Program providers**: government, non-government and commercial organisations currently delivering leadership programs (66 responses).
- **Program participants**: individuals who have completed a leadership program in the last three years (183 responses).
- **Future participants**: individuals who expressed an interest in participating in a leadership program in the next three years (187 responses).

* A further 176 responses were incomplete and were not used in the data analysis.
3.3 Interviews

Interviews were conducted with eleven people from a range of organisations to better understand the goals, offerings and challenges of the leadership programs that they were associated with.

3.4 Analysis

Research, survey and interview results were analysed to identify key types of programs, offerings and trends in the leadership program landscape. Recommendations have been made based on analysis of findings and insights from the authors within the scope of the project objectives.
4 Executive summary

The scan identified seventeen ‘long-term’ rural leadership programs delivered at a national (5), state (1) and regional (11) level. A further eighteen programs that act as ‘short-term or introductory’ leadership programs were also identified.

People that have completed rural leadership programs mainly come from the community, business and industry sectors.

![Figure 1 Sector focus of rural leadership programs](image_url)

Access to rural leadership programs is strongest in Victoria, with ten regionally-based programs available across the state. The Victorian model is strengthened by the role of the Victorian Regional Community Leadership Programs Secretariat (VRCLP), which has had a pivotal role in enabling stronger collaboration between the ten Victorian programs to improve sharing of experiences and resources.

Programs are still predominantly delivered face to face, facilitating vital interaction and enabling strong relationships to be forged between participants.

Future participants are expressing a preference for increased online delivery as a proportion of delivery channel type to overcome the time, financial and opportunity costs associated with travel. 18% of long-term programs and 39% of short-term courses have defined online component within their delivery structure. The E-Leaders program (run by the National Rural Women’s Coalition) demonstrates the potential of greater incorporation of online learning into leadership programs that could be considered by other providers.

Time available and cost were identified as the two key barriers to participating in rural leadership programs. Program duration ranges from 1 ½ days for the Murraylands Leaders Program, through to 59 days for the Australian Rural Leadership Program (ARLP).

There is a misalignment in future participant expectations of what a leadership program requires in terms of time commitment required and what is on offer through existing programs. Program providers could assess the value of providing a clearer learning pathway to participants by offering
(or identifying) ‘introductory’, ‘advanced’ or ‘specialty focus’ rural leadership programs to their target market.

The issue of time availability also highlights the need for program deliverers to continue to highlight the benefits, value and accessibility of their programs and perhaps consider changing the delivery mechanism to decrease the time needed for participation.

Approximate costs to participants to complete the long-term rural leadership programs ranged from zero upfront fees through to $6,600.00. Subsidisation of participant involvement ranged from 34% subsidisation through to 100% subsidisation. Program delivery costs ranged from $5,555.00 for a 12 day regional community leadership program through to $59,400.00 for the ARLP. Program providers rely heavily on scholarships, grants and sponsorships to deliver their programs.

The Australian Future Cotton Leaders Program, Leaders for Geelong and the Gippsland Community Leadership Program now use a more structured and accountable project development and implementation model to ensure the work of participants is congruent with the strategic aims of their programs. Rural leadership programs should use well-structured and accountable project development and implementation models to add value to the participant experience and deliver further tangible and visible project outcomes.

Sound program evaluation methodology is an important contributor to the long-term sustainability of rural leadership programs. Program deliverers interviewed believed that the issue of ‘attribution’ was a challenge in their evaluation methodologies. Independent and verified assessment of the impacts of programs on participant capacity and how this in turn plays a quantifiable role within their industries, communities and regions will assist in the attraction and retention of funding and resources for rural leadership programs.

Alumni programs provide value for participants through ongoing access to peer networks. Program providers continue to strive to identify a sustainable investment in their alumni programs. Providing a high value experience for leadership program participants will increase their commitment to an alumni program and generate opportunities for referrals and access to resources.

Potential program investors should consider the ‘reach’ of the program that they’re intending to support. Whilst many programs are branded as community leadership programs, analysis of alumni shows that most participants appear to participate as employees within the small business or government sectors. Hence potential investors could assist in increasing the participation of community representatives in leadership programs as well as supporting the development of online participation to address the barriers of time and travel for rural and remote-based participants in larger states.
5 What’s on offer

5.1 Long-term rural leadership programs
The scan identified seventeen long-term rural leadership programs (over ten days’ duration) delivered at a national (5), state (1) and regional (11) level. These programs saw participation from the Community (40%), Business (30%), Industry (20%) and Environmental (10%) sectors.

5.1.1 National programs
The national programs typically have a mix of regional and capital-based delivery locations. In broad terms, they aim to:

- Improve the capacity of rural leaders to engage and contribute to their communities and industries
- Support and develop emerging leaders
- Create and develop high-level, strategic networks
- Assist ongoing engagement between program participants, their sectors and key decision makers

</tr>
</tbody>
</table>

Of the national programs, the Australian Rural Leadership Program (ARLP) continues to maintain a strong profile with over 800 graduates and 21 programs delivered since 1994.

5.1.2 State programs
The only current state-level program identified was the Tasmanian Leaders Program, which has a target audience of business and community participants. It delivered in urban and rural locations across Tasmania and is run by Tasmanian Leaders Inc.

The Western Australian Regional Leadership Initiative is being driven by the Department of Regional Development. It is currently awaiting Cabinet approval to go to tender, with delivery anticipated in early 2016.
5.1.3 Regional programs
Access to long-term rural leadership programs is strongest in Victoria, with nine regionally-based programs available across the state.

The Victorian model is strengthened by the role of the Victorian Regional Community Leadership Programs Secretariat (VRCLP), which has had a pivotal role in enabling stronger collaboration between the ten Victorian programs (one of which is classed as ‘short term’) to improve sharing of experiences and resources. (Refer to Section 6.5 for a more detailed description of the role and impact of the VRCLP.) Two long-term regional leadership programs are available in NSW.

5.2 Short-term, introductory rural leadership courses
Seventeen short courses designed to build or enhance leadership skills were identified. This included five national-level courses, seven state-level courses and six regional-level courses. These programs mainly involved the Business (29%), Community (24%) and Indigenous sectors.

Details of all programs are shown in Appendix 1.
6 Program analysis

6.1 Program cost

Program delivery costs ranged from $5555.00 for the 12 day Ballarat and Western Region Leaders Forum through to the $59,400.00 for the 59 day Australian Rural Leadership Program. Subsidisation of participant involvement ranged from 34% (upfront cost of $3300.00) subsidisation through to 100% subsidisation.

Approximate costs to participants to complete the long-term rural leadership programs ranged from zero upfront fees through to $6,600.00. As a means of comparison the (non-rural) Leadership Development Program provided by the University of Melbourne (Mt Eliza) costs $9,891.00 for a five day residential program – equivalent to $1,978/day.

An outline of comparative program costs for participants is shown below. (Note – some providers indicated that financial data on their programs could not be disclosed, resulting in reduced program and course listing.)

</table>

82% of short-term rural leadership courses programs offered had some form of subsidy available to participants, whilst all the long-term rural leadership programs offered subsidised or sponsored places.
Survey work undertaken by the VRCLP in conjunction with the University of Ballarat in 2013, identified that 56% of participants in the Victorian regional leadership programs were employer funded. This data covers programs delivered across nine regions from 1996-2014. A further 17% of participants were self-funded and 11% received full scholarships. 14% of participants used a mix of these contributions to fund their involvement. (2% of respondents did not provide an answer.) Coverage of participant travel and accommodation costs varied on a program by program basis. Most of the regional programs required participants to cover their own travel costs.

6.2 Program delivery mode

Face to face was the primary delivery format in 88% of long-term rural leadership programs and 78% of short-term programs. This model has substantial benefits, including opportunities to:

- Get to know other course participants and develop strong relationships with them
- Build trust within groups
- Increase levels of interaction within groups
- Enhance peer to peer learning
- Build networks
- Be stimulated by different environments
- Set up a focused learning environment
- Enhance connection with course facilitators and presenters
- Have allocated time for reflection as part of the learning cycle

The downside of the face-to-face model is the cost, both to provider and participants. Experience of the authors’ shows that the ‘big ticket’ items to the provider include presenter or facilitator costs; venue, food and accommodation costs; and travel costs. Costs to participants are the financial cost of attending, travel and time. Participants also need to weigh up the opportunity cost of their attendance against future benefits.

6.2.1 Online delivery

Only 18% of long-term programs and 39% of short-term courses have defined online component within their delivery structure.

The Australian Future Cotton Leaders Program conducts two online forums for participants that are open for up to ten days. During this period participants are asked to provide input into industry-specific issues such as policy development, future funding and technical issues. They also conduct closed email discussion group ‘hot-seat’ sessions where a participant seeks feedback from program peers on a specific issue.

The E-Leaders course, delivered by the National Rural Women’s Coalition (NRWC) in 2013, is a good example of how a program can increase the geographical reach of rural leadership courses using online platforms. The program was structured around a series of twelve interactive webinars covering several aspects of leadership, held on weekly basis over a period of three months. It involved 20 participants from across Australia, chosen from 72 applicants using a merit-based selection process. Participation in the course was free through funding provided by the National Office for Women in the Department of Prime Minister and Cabinet. All webinar sessions were moderated by the NRWC Project Coordinator.
An internal evaluation of the 2013 program found that the technology (Blackboard Collaborate) used is sound, web-based and simple to use, helping to overcome time and cost as major barriers to participation. The trade-off is a reduced ability to develop ongoing relationships between participants which may assist a stronger embedding of program outcomes and ongoing peer support. Online channels are also highly dependent on participants’ access to a reliable and affordable online connection.

Overall the E-Leaders program demonstrates the potential of greater incorporation of online learning into leadership programs that could be considered by other providers.

6.2.2 Project work
Participants are required to develop and deliver a project in 82% of long-term programs and 67% of short-term courses. Projects have been incorporated into leadership programs to help embed participant learning in a practical context. Application of the skills developed through project implementation is also intended to provide tangible benefits to stakeholders and communities that participants represent.

Leaders for Geelong is a two year program with intensive leadership focussed activities and events in year one, followed by participants undertaking an active learning project with their peers in the second year. The dedicated period of time to focus on the project was intended to provide more clarity for participants and their employer sponsors. This shift in focus has seen an increase in the sophistication and quality of projects proposed and delivered by participants.

Leaders for Geelong uses a highly structured and accountable project development and implementation model to ensure the work of participants is congruent with the strategic aims of the program. Initial project ideas are put forward by cohort participants. These are refined into eight key project topics and scoping documents prepared. Participants then decide on which of the eight projects they would like to be involved in. Projects can also be nominated by an organisation in the community. Each project has an auspicing organisation which will potentially benefit in some way. Each project team is supported by a coach to assist with learning, reflection and tracking of progress.

This approach should lead to an increased value-add from the program for the Geelong region and provide valuable experience to participants in the development and delivery of strategic projects of measureable value.

Examples of recent projects from the Leaders for Geelong program include:

- The Surf Centre of Excellence - explores the opportunity to bring together surf industry knowledge, infrastructure and technology in the form of a surf centre of excellence.
- Eastern Park, Geelong - aims to showcase and stimulate interest in Eastern Park, including all its assets and features, and engender interest from partners to further develop Geelong’s most significant piece of urban open space.
- The Barwon Produce Map - an interactive website for producers to connect with consumers and showcase their products.

Participants in the Australian Future Cotton Leaders Program are required to submit a project to the program selection panel prior to commencing the program. The panel reviews each project and provides feedback based on its strategic value to the specific components of the cotton industry supply chain.

The Gippsland Community Leadership Program has moved from an open, flexible approach to a more formalised approach regarding participant projects. Project definition needs to be completed.
by the mid-year residential of the program. Participants are able to continue with project implementation post-program, but need to comply with documentation and reporting guidelines.

All program deliverers interviewed believed that projects added extra value to their programs and enhanced leadership skills outcomes.

6.3 Program evaluation

Sound program evaluation methodology is an important contributor to the long-term sustainability of rural leadership programs. Independent and verified assessment of the impacts of programs on participant capacity and how this in turn plays a quantifiable role within their industries, communities and regions will assist in the attraction and retention of funding and resources for rural leadership programs.

84% of long-term programs conduct post-program participant surveys to identify the ongoing and sustained impacts of the programs. 68% utilise before and after skills self-assessments to identify the areas of strongest growth and development for participants. The ARLP, Wine Future Leaders and Gippsland Community Leadership programs regularly use graduate case studies to highlight qualitative, attributable program impacts on participants.

All program providers interviewed indicated that a key evaluation challenge remains in identifying the attribution component of the program. i.e. what changes/improvements could be directly attributed to participation in the program.

Marcus Oldham College uses a post-program survey, 12 months after program completion. The survey measures participant progress on commitments that they made to establish if they moved from ‘intention to implementation.’ This also helps to remind participants of their commitments and reinforce the message that leadership is an ongoing commitment of learning and action. The results generated provide valuable evidence for supporters and sponsors of the program by highlighting the tangible contributions that graduates make to their industries and communities. Program participants who have received an Invergowrie Foundation Leadership Award are required to complete a post Program evaluation report that is provided to The Invergowrie Foundation. An annual impact report based on the post-program survey is not publically available.

Program evaluation is now a high priority of the Leaders for Geelong program, with a greater emphasis on capturing hard (quantitative and verifiable) data. Measures of participant progress are made prior to, midway and post-program based on an authentic, distributive and adaptive leadership model. Post-survey work is trying to measure how capacity has been increased amongst graduates and how this has contributed to the growth of the region. The impact of the Leaders for Geelong program has also been measured by a study undertaken by Deakin University that examined the social return on investment of the program. Longitudinal impact studies are also being undertaken.

The partnership approach between Leaders for Geelong and Deakin University to provide an independent measurement of program impact could be adopted by other program providers to help maintain the financial sustainability of their programs.

In summary, demonstrating value to participants and funders is a critical area for program providers to deliver on.
6.4 Alumni programs

6.4.1 Alumni models used

Alumni programs offer a structured opportunity for program participants to maintain connection with each other once they have completed their course. The models reviewed vary from self-organising Facebook groups through to well-structured networking and professional development events featuring high profile speakers.

Alumni programs were offered by 61% of program providers. Support provided included:

- Facebook page
- Email network
- Professional development events
- Networking events
- Mentoring programs
- Connection with previous program participants

The Gippsland Community Leadership Program continues to engage its graduates through their membership of the program advisory committee. ARLP graduates become members of the Australian Rural Leadership Foundation with full voting rights – and of course the chance to impress people with this on their CV!

The Great South Coast Leadership Program is aiming to extend the reach of its alumni program by connecting its graduates with those of national programs such as the ARLP. Marcus Oldham College is intending to increase the profile of its leadership and alumni programs through initiating state-wide rural leadership forums. Industry programs such as the Wine Future Leaders Program provide alumni opportunities for input into industry directions as well as increased profile and connections within the wine and grape industry.

The National Rural Women’s Coalition has trialled two self-organising alumni models for their ‘E-Leaders’ and ‘E-Sustainability programs. The ‘E-Leaders’ graduates came from a range of backgrounds with differing motivations and projects. Their LinkedIn group used to maintain connection had little engagement and eventually closed. The ‘E-Sustainability’ program had participants with more strongly held shared values and collaborative projects. Their private Facebook group has continued successfully with little input from the NRWC.

The Australian Future Cotton Leaders Program has also successfully used closed Facebook groups as an alternative to a formalised alumni structure after initially trialling LinkedIn groups, which saw low participation rates.

6.4.2 What participants want from alumni programs

Participant feedback has shown that a major attractant of the ARLP and national industry-based rural leadership programs is the opportunity to develop and access networks. This was echoed by ‘future participants’ survey responses.

Participants are also looking for the chance to build networks with graduates from previous cohorts. People in these cohorts are seen as more experienced, influential and connected leaders who may further assist leadership, personal and business development opportunities.
Survey data highlighted that alumni programs can reduce the risk of graduates feeling isolated once they’ve completed their program. Interviews revealed that the programs enable participants to gain comfort from being surrounded by people who’ve either shared or had a similar experience in a leadership program. They’re with people who understand and accept the often significant changes in their lives from the programs they’ve participated in. A previous program participant explains, “I wanted to maintain the amazing sense of connection and motivation that was present in the course. It is a means of consolidating the new skills learned in the course.”

The survey work undertaken by the VRCLP (refer to Section 6.5) revealed that guest speaker events, professional development workshops and networking functions were the main preferred activities sought in alumni programs. The majority of respondents preferred a ‘pay as you go’ model for attendance and were wanting events offered on a quarterly basis.

### 6.4.3 Benefits of alumni programs to program providers

Program providers gain a tangible benefit through referrals generated by alumni programs, with up to 30% or more new program referrals being attributed to past participant involvement in alumni programs by almost 40% of program providers. However it is unclear what the actual return on investment of the alumni programs are when their establishment and running costs are taken into consideration.

Few programs charge for alumni participation. The alumni activities can be used as powerful marketing tool when successfully implemented. A well-designed alumni program will continue to add value for the program participant’s experience. This will increase their likelihood of recommending the program to others, with the barrier of price decreasing as value from the program continues beyond the actual program delivery period.

### 6.4.4 Making future alumni programs work

Interviews with providers revealed that developing successful alumni models and programs has been a key challenge for regional and national programs. Much of the challenge of alumni programs is in being able to identify a quantifiable return on investment for both participant and provider.

Providing a high value experience for leadership program participants may increase their commitment to an alumni program and generate opportunities for referrals and access to resources.

A brief online review of university alumni programs showed that they exhibit common key success factors. Successful programs:

- Provide avenues for new job or business opportunities
- Maintain databases that identify graduate roles and use these to target and reach graduates
- Provide the opportunity to maintain, reignite and build valuable networks that provide a tangible benefit to alumni
- Facilitate professional development opportunities

Alumni programs that help to recreate the feeling of achievement from leadership programs and provide ongoing network development may help maintain higher participation levels and connection with (as well as commitment to) their leadership programs.

### 6.4.5 Areas for future investment

The experiences of program providers showed that participants enthusiastically support and attend alumni events if they’re organised for them. Alumni programs could be further improved with greater access to resources such as a funded coordinator’s position.
6.5  A program support model – the Victorian Regional Community Leadership Program Secretariat

6.5.1  Role
The Victorian Regional Community Leadership Programs Secretariat (VRCLP) was established in 2012 by the Victorian Government to support the (then) nine Regional Community Leadership Programs across Victoria.

The strategic imperatives of the VRCLP are to:
- Demonstrate the impact of Regional Community Leadership Programs (RCLPs)
- Raise the profile of RCLPs
- Build the capability of RCLPs
- Support sustainable strategies of RCLPs

Each of the ten RCLPs is represented on the board of the VRCLP. The board meets six times per year, using three face to face meetings and three teleconferences. The VRCLP holds an annual conference for board members and all RCLP committee members.

6.5.2  Key activities
The VRCLP initially focused on gathering baseline data to demonstrate the collective impact of the RCLPs and the return on investment that they provide. As part of this process, a state-wide survey of 1700 RCLP alumni was undertaken in 2013 in conjunction with the University of Ballarat. A further survey was undertaken in 2014 with RCLP stakeholders to understand their perceptions of program benefits.

The VRCLP has also worked to identify and implement options to increase collaboration and operational efficiencies across the RCLPs.

Importantly, the VRCLP has represented the collective needs of all RCLPs with key stakeholders, including current and future funders.

6.5.3  Value delivered
Gathering of baseline data has enabled the identification of the collective impact of RCLPs across Victoria on participants, the communities they serve and the organisations that they’re a part of. For example, the survey work undertaken showed that 52.5% of respondents increased their community engagement activity through their participation in RCLPs. This was extrapolated to be the equivalent of up to $13.6M/year in volunteering time contributed by RCLP alumni. When compared to Australian Bureau of Statistics Census data, the VRCLP results showed that RCLP alumni provide volunteer support to a greater number of organisations in comparison to the general population.

The data and results from the VRCLP survey work have been valuable in providing verifiable evidence of the impact of RCLPs to key funders, stakeholders and program supporters. In practical terms, this enabled the VRCLP to gain a new state government funding commitment of $8.0M to support RCLPs in Victoria. Scholarship support, grants and funding were also sourced from the Gardiner Foundation, FRRR and the Williamson Foundation.

The VRCLP has improved operational efficiencies by developing standardised funding agreements at a state and regional level. One major funder is now contracted via a single funding agreement, rather than the ten previous agreements.
A collaborative approach to resource utilisation has been another area of value provided by the VRCLP. For example, instead of individual RCLPs contracting a consultant to improve their alumni program, the VRCLP model provides the opportunity for the consultant to collectively provide services to several RCLPs thus reducing transaction costs and leveraging benefits across all RCLPs. Efficiencies are also being gained through sharing of best practice between RCLPs.

6.5.4 Future opportunities
With valuable ‘runs on the board’ from its first three years of operation the VRCLP is now looking to build strategic partnerships with organisations that share a similar target audience demographic, but provide different services. This model is regularly used in marketing to reach and engage new clients at relatively low cost through resource sharing.

Further opportunities exist in further using a collective approach to improve alumni programs (through web-based platforms), licensing of software, marketing and investor recognition and relationship development.

The secretariat’s role has enabled the RCLPs to think more strategically about their program design and long-term sustainability. It’s helped to highlight the importance of rural leadership development and has increased government and corporate support.

This is a sound model for consideration by other states, regions or industries looking to improve the profile, sustainability and effectiveness of regional leadership programs.
7 Previous Leadership Program Participants’ Experiences

7.1 Introduction
Input into the environmental scan was sought from people who had already participated in a rural leadership program. The aim was to determine the key benefits from their participation and to identify any impediments to successful completion of their courses. Analysis is based on the 183 responses to the survey.

7.2 Key points
- Time available and the commitment required to complete leadership programs were the main challenges experienced by participants
- The benefits gained closely matched participant expectations
- 81% of participants joined an alumni program

7.2.1 Time and commitment requirements
Comments received from previous participants show that program deliverers need to be clearer regarding the overall time required to complete leadership programs
- “Time expectation for the project component of the course not clear to start with.”
- “The expense of time out of work/business and additional personal time contribution expectations.”
- “Understated commitment required for project work.”
- “Completing the identified project in the time frame.”
- “Attending the course after a full day at work then driving the 60km home late at night.”

Clearly there’s a balancing act between having sufficient time allocated by program deliverers to properly provide core content versus the time availability of participants. A program provider interviewed reflected on the time constraints, saying, “Well, how long does it take to create a leader? Participants need to be focused on developing their own potential. Those concerned with time may be less clear on why they’re coming along in the first place.”

Figure 4 Key challenges - participants
Experience of the authors in delivery of professional development programs over the last 15 years has shown that attracting participants to longer running programs is becoming increasingly difficult, with many people looking for ‘instant solutions’ to complex problems. However, the evidence from program providers doesn’t fully reflect this, with constant or consistent demand being experienced for their programs.

7.2.2 Travel required
Table 7 shows that 37% of participants travelled less than 60km (each way) to attend each module of their leadership program. A further 29% travelled up to 200km (each way) to attend.

<td>2%</td>
</tr>
</tbody>
</table>

7.2.3 Delivery location
The majority (56%) of program participants who responded to the survey live in Victoria where 58% of all long-term rural leadership programs were delivered and 29% of short-term rural leadership courses were delivered. Delivery location was based on data provided by program providers. The ‘skew’ of data towards Victoria largely reflects the ten regional community leadership programs delivered there.

![Figure 5 Delivery location of long and short-term programs](image)
7.2.4 Delivery mode

Face to face was the primary delivery format in 88% of long-term rural leadership programs and 78% of short-term programs. Face-to-face delivery greatly assists in building relationships and rapport amongst participants. The trade-off in face-to-face delivery is both the opportunity and real costs associated with travel. Refer back to Section 6 for a more detailed description and analysis of program delivery modes.

7.3 Expectations and benefits of participation

Past-participants surveyed were presented with a selection of seven core expectations that they might have wanted to realise from undertaking a leadership program. These were based on the aims of several existing rural leadership programs and included some of the core competencies that underpin effective leadership.
Past-participants were also asked about the benefits they gained from their leadership program, based on the same indicators of expectations. The two graphs show a strong alignment between expectations sought and benefits gained.

![Figure 8 Participant benefits post-program](image)

Program providers interviewed also reiterated that improved network opportunities as a key driver for people wishing to undertake long-term rural leadership programs.

Interestingly, ‘political influence’ is neither a key expectation nor benefit for people participating in rural leadership programs. However, several programs include meetings with MPs in state and federal parliament as a core component of their programs. The long-term impact and value of these activities may be worth including within any longitudinal evaluation of leadership programs.

### 7.4 Alumni role

The high proportion of face to face delivery within rural leadership programs combined with the time that participants spend together on project teams provides sound opportunities for development of networks and building of relationships. Alumni programs provide an ongoing structure for these relationships and networks to be maintained.

Over 80% of participants have joined the alumni networks of their programs. The main reason given for joining was to maintain the networks developed, which is consistent with participant benefits gained from the program and their driver for participation. Further work needs to be undertaken to identify how long participants maintain their involvement in alumni programs.
8 Future Leadership Program Participant Motivations

8.1 Introduction
Input into the environmental scan was sought from people who are yet to undertake a rural leadership program but have expressed an interest in participating in the next three years. 187 complete responses were received in this category.

The aim was to determine the location of potential participants and to identify what they hoped to gain from their participation.

8.2 Key points
- Survey responses were received from people based predominantly in NSW and Victoria
- Their main motivation to undertake a rural leadership program is to develop their leadership skills
- The preferred duration of a program is between two and five days
- Key barriers to participation are time, cost and travel
- Preferred delivery modes are face-to-face and online.

8.3 Expectations of Rural Leadership Programs
Survey respondents were asked what they hoped to gain from participating in a leadership program. Unlike previous program participants, this question was an open-response question, with no prompts regarding topics.

The main outcomes being sought were:
- Leadership skills
- Networks
- Engagement skills
- Improved capacity of their communities

8.3.1 Leadership skills
Not surprisingly, the primary response was to ‘develop leadership skills.’ Further analysis of responses was undertaken to better understand why future participants wanted to develop their leadership skills. Analysis showed that their core reasons were strongly related to improving the capacity of their communities through taking on leadership roles.

8.3.1.1 Improving community capacity
This fits with the ‘servant-leader’ definition originally developed by Greenleaf (1991) proposing that a ‘servant-leader works for the common good of their community. They attempt to empower and encourage others to work together in ways that strengthen and transform communities.’ Respondent’s comments included:
- “Increase skills and knowledge base to effectively lead rural rejuvenation and growth.”
- “Community growth for smaller communities.”
- “I’d consider anything that might improve prospects for the Hunter and other non-capital regions.”

Figure 10 Future participants expectations
• “Skills, knowledge, networks and tools that I can bring back to my community to make a difference.”
• “Skills to become help lead our community into the future.”
• “I would hope to develop better leadership skills, to ensure I can better contribute to rural, regional and remote communities that I come into contact with.”
• “I would like to gain or improve my knowledge in the area of developing communities including leadership skills.”
• “Better ways to lead community.”

8.3.1.2 Improved ability to take on leadership roles
Comments reflecting this included:
• “Better leadership of groups I chair.”
• “Enhanced skill in taking on a broad variety of leadership roles.”
• “Confidence and skills to take on leadership roles within my community.”
• “More confidence to lead a group of people and know what I am doing is right.”
• “How to work alongside, communicate and collaborate with people from a leadership position.”

8.3.2 Networks
Respondents wanted to develop networks to support their ongoing learning and connect with people that have a similar, proactive approach to leadership in their communities. Their comments reflected this:
• “Broader networks amongst other ‘can do’ people.”
• “Network with other leaders, connecting with others to solve local problems and knowing I can continue to draw upon that network.”
• “Meeting other leaders in rural areas.”
• “Greater connection across the region.”

8.3.3 Engagement skills
Respondents are looking for skills to actively engage their local communities to improve connection and influence the changes that affect them. Evidence of this included:
• “I hope to gain practical ways to engage my community - we badly need connectedness.”
• “Leadership skills in which I can use when engaging with people in the local community.”
• “I would like to gain or improve my knowledge in the area of how to effectively engage the community members to drive change.”
• “Skills to help encourage my rural community to get involved in new and different aspects of life.”
8.4 Time available

Most respondents (47%) favoured a leadership program of two to five days' duration. A further 20% stated that they could devote six to eight days. 13% stated that they could devote up to 30 days to a rural leadership program. Interestingly, 16% of respondents stated that they were only willing to devote one day to a rural leadership program.

This contrasts with programs offered, where only 20% are held over two to five days with most (51%) being held over a 9 to 30 day period.

This data provides a few issues to consider:

- It reinforces the challenge of ‘time available’ identified by previous program participants
- It highlights the disconnect between future participant expectations of what a leadership program requires in terms of time commitment and what’s currently on offer
- It flags the potential to provide a clearer pathway for leadership programs to engage participants in ‘introductory’, ‘advanced’ or ‘single focus’ rural leadership programs
- Current long-term programs appear to still be experiencing strong demand for positions

Whilst most providers already have robust programs in place, a package of introductory or specialised program components could include:

- Introduction to rural leadership
- Building your community and industry networks
- Leadership skills to increase community capacity
- Developing effective community engagement skills
8.5 Barriers

The key barriers for future participants are ‘time required to participate’ and ‘cost of leadership programs.’ This is consistent with a preference for two to five day programs rather than longer duration programs.

It also highlights the need to promote the availability of program subsidies, grants and scholarships to potential participants. 82% of short-term rural leadership courses programs offered had some form of subsidy available to participants, whilst all the long-term rural leadership programs identified offered subsidised or sponsored places. As outlined in Section Six, subsidisation of participant involvement ranged from 34% (upfront cost of $3300.00) subsidisation through to 100% subsidisation.

Travel was also identified as a barrier by future participants.

8.6 Delivery preference

Respondents expressed an almost equal preference for face to face (35%) and online (32%) delivery which would help address the identified barrier of travel for future participants. Therefore, a change in focus of delivery modes is suggested for future program delivery to have stronger online and project elements, whilst reducing the face to face component.
9 Recommendations

Six brief recommendations have been made to provide direction on the ‘next steps’ following completion of this environmental scan, based on the information reviewed throughout. They are intended to improve the reach and effective use of resources of rural leadership programs. Importantly, they are also intended to help address one of the key identified barriers to participation in time available to participants.

**Recommendation 1 – Consider the secretariat model**
The Victorian Rural Community Leadership (VRCLP) secretariat model to be considered by other states or regions to improve the coordination, delivery, profile, financial sustainability and effectiveness of regional leadership programs and identify the most appropriate support mechanisms required. Where only one or a small number of community leadership programs are within a state, a regional umbrella group be considered.

Basis for Recommendation:
The Program (VRCLP) secretariat’s role has enabled its regional program deliverers to think more strategically about their program design and long-term sustainability. It’s also helped to highlight the importance of rural leadership development to maintain government and corporate support.

**Recommendation 2 – Incorporate e-learning options**
Rural leadership programs develop an increased utilisation of structured online learning tools as part of their delivery mechanisms.

Basis for Recommendation:
The National Rural Women’s Coalition (NRWC) E-Leaders program is a good example of increasing the geographical reach of short-term, introductory rural leadership programs. The technology used is sound, web-based and simple to use. It overcomes the major barriers to participation in rural leadership programs – time and cost.

**Recommendation 3 – Ensure participant project work is well designed**
Rural leadership programs use well-structured and accountable project development and implementation models to add value to the participant experience and deliver further tangible and visible project outcomes.

Basis for Recommendation:
Programs such as the Australian Future Cotton Leaders Program, Leaders for Geelong and the Gippsland Community Leadership Program now use a more structured and accountable project development and implementation model to ensure the work of participants is congruent with the strategic aims of their programs.
Recommendation 4 – Develop a partnership approach to evaluation

A partnership approach such as that between Leaders for Geelong and Deakin University, to provide an independent measurement of program impact, could be adopted by other rural leadership programs to help measure and maintain the financial sustainability of their programs.

Basis for Recommendation:
Sound program evaluation methodology is an important contributor to the long-term sustainability of rural leadership programs. Independent and verified assessment of the impacts of programs on participant capacity and how this in turn plays a quantifiable role within their industries, communities and regions will assist in the attraction and retention of funding and resources for rural leadership programs, and in so doing, help reduce the cost barrier for participants.

Recommendation 5 – Maintain alumni programs

Rural leadership programs continue to maintain and strengthen alumni programs

Basis for recommendation:
Alumni programs offer a structured opportunity for program participants to maintain connection with each other once they have completed their course. Program providers continue to strive to achieve sustainable investment in their alumni programs. Providing a high value experience for leadership program participants will increase their commitment to an alumni program and generate opportunities for referrals and access to resources.

Recommendation 6 – Develop clearer learning pathways

Rural leadership programs provide clearer, and more flexible learning pathways to participants by offering or identifying ‘introductory’, ‘advanced’ and ‘single/specialist focus’ short/long rural leadership programs to their target market. Each should identify the time needed to participate in the program and the basis for this.

Basis for recommendation:
Time available was identified as a major challenge and barrier to involvement by both previous and future program participants. There’s a misalignment in future participant expectations of what a leadership program requires in terms of time commitment and what’s on offer through existing programs, and also in program providers’ understanding of what future participants actually want.
Appendix 1. Rural, Regional and Remote Leadership Programs in Australia

This section summarises survey responses from program providers, in raw data form and in accordance with the following six categories:

1. **Long-term, dedicated** rural leadership programs – comprehensive programs which aim to build the full range of leadership competencies in participants. These are divided into national, state and regional level programs. Most programs are subsidised or offered with government support.

2. **Short-term, introductory** rural leadership programs – overview programs which introduce participants to core leadership principles and skills.

3. **Programs awaiting funding** – programs ready to be offered to the general public once funding is confirmed.

The data in the tables below reflects the words of survey respondents. This best reflects each provider’s self-assessment of their offering.
